

# Special solutions by KOMEG: A very special type of intelligence.

You need unambiguous data to substantiate clear facts. Another area with good arguments in favor of KOMEG:

With more than 25 years of experience, KOMEG ranks among the leading specialists for developing and manufacturing computer systems for production-integrated quality testing and process control. So far, more than 4,000 QDS systems have been installed in numerous sectors of industry.

KOMEG's quality data technology is based on a concept of modular standard components, which is extremely intelligent and flexible: It not only performs sophisticated data processing and analysis tasks; it also implements individualized measuring solutions in special user-specific measurement technology. The practice-oriented basis is provided by freely programmable software and configurable hardware elements.

Just tell us what you want – and KOMEG will convert your requirements into convincing facts. Guaranteed by our proven team of experienced engineers and technicians in the fields of planning, development, project management, design engineering, application and service.

KOMEG sets itself new challenges every day. After all, challenges are our specialty – and individual solutions our trademark.

Since customers nowadays cannot work with yesterday's ideas, KOMEG devises something new practically every day: individually developed system solutions for designing measurement workstations, from workpiece feed right up to the readjustment of production equipment. For example:

- special measuring equipment
- manual measuring devices
- multi-point measuring equipment
- automated measuring systems
- automobile body measuring systems
- fitting and loading systems

The customer defines the goal – KOMEG focuses on getting there. The results are configurations that are as unique as the tasks to be performed. A benchmark that has no place for the average.

And since we at KOMEG enjoy venturing into new territory so much, we treat even smaller special projects as a huge challenge. Especially when our creativity is fired by short deadlines.

KOMEG: May we offer you something out of the ordinary?
